PROFESSIONAL SUMMARY

DevOps Engineer with **1+ years** of experience in **CI/CD automation (Jenkins, GitHub Actions)** and **Infrastructure as Code (Terraform)** with strong **AWS** expertise and hands-on exposure to **Azure** and **GCP**. Proficient in **Kubernetes** and **Docker** with expertise in containerized deployments, monitoring, alerting, and observability. Experienced implementing **ECS, EKS, RDS, EC2, Route 53, CDN, WAF**, and scalable cloud environments.

EDUCATION

University College Of Engineering Nagercoil <i>Bachelor of Engineering in Computer Science and Engineering</i>	Nagercoil, Tamil Nadu <i>Oct. 2021 – May 2025</i>
--	--

TECHNICAL SKILLS

Configuration & Programming Languages: HCL, Bash, Shell Scripting, JSON, YAML, Java, Python
Platform tools: Docker, Kubernetes, Helm, Jenkins, GitHub Actions, ArgoCD, Grafana, Prometheus, ELK Stack, Jira
Cloud Platforms: AWS (EKS, S3, R53, ECS, RDS), Azure (VM, Storage, App Service), GCP (GKE, Compute Engine)
Infrastructure as Code & Database: Linux Administration, Terraform, Ansible, MySQL, PostgreSQL, Redis
Version Control, Web Server & Security Tools: Git, GitHub, Nginx, Apache HTTP Server, SonarQube, Trivy

EXPERIENCE

DevOps Engineer <i>Suntrion TechnoSol Private Limited</i>	July 2025 – Present <i>Chennai, Tamil Nadu</i>
---	---

- Orchestrated CI/CD pipelines using **Jenkins** integrated with **SonarQube** and **Trivy** security gates, enabling automated builds and **6-minute** deployments while remediating **28 pre-production vulnerabilities**.
- Enabled rolling updates for **ECS** service, achieving **99.9% uptime** and **zero-downtime** deployments.
- Provisioned AWS infrastructure using **Terraform modules** with **S3 remote backend** and **DynamoDB** state locking, reducing environment provisioning time by **75%** and enabling multi-environment deployments.
- Integrated **Redis** caching on **EFS**; reduced p95 latency **35%** and preserved cache across ECS restarts.
- Migrated DNS from **GoDaddy** to **AWS Route 53**, transitioned the domain from **.in** to **.com**, and integrated **CloudFront** **CDN** with **AWS WAF** to enhance application performance, security, and global reach.
- Configured multi-stage **Dockerfiles** and **NGINX** reverse proxy, optimizing image size and application delivery.

DevOps Engineer Intern <i>CapeStart</i>	Mar. 2025 – May 2025 <i>Nagercoil, Tamil Nadu</i>
---	--

- Automated **Jenkins** CI/CD pipelines for **5+ microservices**, reducing deployment time from **2.5hrs** to **1hr**.
- Audited **5+ EC2 instances** and **S3 Bucket**, decommissioning idle resources resulted in **15%** cost reduction.
- Built **Grafana** dashboards with automated alerts, cutting issue detection time by **60%** and MTTR by **30 minutes**.

PROJECTS

DevSecOps CI/CD Pipeline on Amazon EKS | *EKS, GitHub Actions, SonarQube, OWASP, ELK, Grafana* | [GitHub](#)

- Established a DevSecOps CI/CD pipeline using **GitHub Actions** integrating **SonarQube**, **Trivy**, and **OWASP** Dependency Check, automating security scanning and reducing manual vulnerability detection effort by **80%**.
- Containerized** the application using **Docker** and delivered it to **Amazon EKS** using **Helm charts** with **ArgoCD** GitOps, enabling automated deployments and reducing release time by **60%**.
- Enhanced observability using **Prometheus**, **Grafana**, and the **ELK Stack**, reducing detection time by **50%**.

Rails Kubernetes GitOps Deployment | *Kubernetes, Docker, Tekton, ArgoCD, Helm, GitOps* | [GitHub](#)

- Reduced deployment errors by **90%** for **React/Spring Boot** apps across **5+** deployments with zero downtime.
- Deployed a Ruby app via GitOps using **Tekton** and **ArgoCD** on **K8s** with 3-agent parallelization for faster builds.
- Delivered resilient **Kubernetes** rollouts, **99.9% uptime**, via **ReplicaSets**, **StatefulSets**, and rolling updates.

API Health Monitoring System | *FastAPI, AWS ECS, SQS, DynamoDB, ALB, Terraform, Docker* | [GitHub](#)

- Designed API monitoring system using **FastAPI**, **ECS Fargate**, **SQS**, **DynamoDB**, and **ALB** for health checks.
- Implemented an **event-driven architecture** where **schedulers** enqueue **health-check jobs** to **SQS** and worker services process them, improving failure detection efficiency by **80%**.
- Built AWS infrastructure with Terraform (**VPC**, **ECS**, **ALB**, **SQS**, **DynamoDB**, **ECR**), cutting setup time by **70%**.

CERTIFICATIONS

- Google Cloud Professional Cloud Architect (PCA) | Microsoft Certified: Azure Fundamentals (AZ-900).
